Tony,

I have just come to add a new table into my app, and when importing into the DICT app I am getting an error

Fatal Error: MySQL error: 1054 - Unknown column 'nameof_start_date' in 'field list' (# 1054).

SQL query: INSERT INTO dict_table SET database_id='idta', table_id='school_type', table_desc='School Type', tbl_comment=NULL, audit_logging='Y', default_orderby=NULL, alt_language_table=NULL, alt_language_cols=NULL, nameof_start_date=NULL, nameof_end_date=NULL, created_date='2009-07-13 13:37:51', created_user='MGR', revised_date=NULL, revised_user=NULL

I thought I may have somehow got the radicore version partially upgraded so to be sure I have completely reinstalled v1.49 and run the dictionary script, but the error still occurs.

Have I missed something?

Graham

Have discovered the problem myself having looked at the notes from previous releases. I have run the script according to the instructions for release 1.46 and this has solved the problem.

Graham

I love it when a problem is solved without me having to lift a finger!
