Subject: Login by email - case sensitivity

Tony,

Just noticed a funny when logging in using email address. If the user doesn't match the case exactly (e.g. accidentally puts a capital first letter) the system finds the user record (can tell this because the user_id gets displayed) but reports the error
A record already exists with this key.

Tony,

Have discovered another incorrect error message when logging in by email address (not sure if this was already there or introduced by this recent fix).

If an incorrect email address is entered > 16 chars the system now displays:

Security Violation
user_id cannot be greater than 16 characters.

This is a bit misleading!

Graham

You are correct. This will be fixed in the next release, which is due in a few days.
