This version contains a few bug fixes and enhancements.

upgraded TCPDF to version 4.8.005
updated 'include.general.inc' to add functions 'convertTZdate()' and 'convertTZtime()'. These will allow timezone conversions on fields of type 'date' and 'time' instead of 'datetime'.
updated footer processing in PDF output so that 'date' and 'time' values are converted into the user's timezone.
updated 'std.table.class.inc' to replace the '_cm_ListView_pre_print()' method with the '_cm_ListView_print_before()' and '_cm_ListView_print_after()' methods.
updated 'std.pdf.class.inc' to include the 'getLinesRemaining()' method.
fixed bug in login screen where the email address was entered in mixed/upper case instead of lower case, causing the error message "A record already exists with this key" to be displayed.
updated 'std.validation.class.inc' to change all 'str*()' functions to 'mb_str*()' (if the mbstring extension has been loaded) as the func_overload option is no longer supported in htaccess files as of PHP version 5.2.7
fixed bug in 'std.update5.inc' which failed if $where was empty, ignoring the fact that $selection was not empty.
updated AUDIT database to add 'email_addr' field to 'audit_logon_errors' table. This is to fix bug when a login fails when using an email address instead of a user id. You will need to run script 'radicore\audit\sql\mysql\alter_table(2009-09-29).sql' in order to update your database schema.
