Subject: Export Templated Task

Hi,

Is there somewhere in the system where you can export a simple template of a task? Something that outputs the standard 3 or 4 lines needed in the task script file?

I saw something in the dictionary system that did this but it was only a subset of the tasks and not a complete list of the task defined in the Menu system.

Thanks,

Kyle Brost

You can only export the contents of the MENU database for a subsystem. This function is available as a navigation button on the 'List System' screen. This will allow you to import those details to another database.

There is no point in exporting the contents of a component script as it already exists in the file system and not the Radicore database. Any file can be copied to any backup device.
