View Forum Message <> Reply to Message

This version contains the following enhancements:

modified the workflow system to allow more than 2 Explicit OR-Splits to come out of a transition. Any number can be specified, but they must all have a pre-condition that can be tested for TRUE except for the last one. This will be used as the default when none of the pre-conditions evaluates to TRUE.
allow the text on the menu/home page for pending workflow items to be customised. For details see FAQ130.
added 'soap' directory to assist in the development of web services. Point your browser to 'radicore/soap/index.html' to see some working examples.
