Hi,
Tried to log on to my own installation and got the following error:

2010-04-15 19:19:19

Fatal Error: mysqli_connect(): Access denied for user '****'@'localhost' (using password: YES).

Error in line 221 of file 'C:\Program Files\Apache Software Foundation\Apache2.2\htdocs\radicore\includes\dml.mysqli.cla ss.inc'.

PHP_SELF: /radicore/menu/logon.php

SERVER_ADDR: 127.0.0.1

SERVER_NAME: localhost

HTTP_HOST: localhost

REMOTE_ADDR: 127.0.0.1

REQUEST_URI: /radicore/menu/logon.php?csxslt=off

As far as I can see this is generated from start_session.
I am not able to get to the login screen.

I have edited the config file to add dbusername + dbuserpass but to no avail.
Help, I am new to this so please be kind.

PS) I could give the logs but I thought this is an easy one for the experts.
Avus

The message "Access denied for user '****'" should give you a clue. It means that the variable $GLOBALS['dbusername'] in the config.inc file has not been changed. If you read point #10 of the installation instructions at http://www.radicore.org/installation.php you will see where it says that you have to modify that file to suit your particular installation, and that means the database username and password.

Thank you, I feel very stupid as I am sure that I had made the change. I am not sure what happened.
