This version contains the following changes:

merge 'align','valign' and 'class' attribute values into a single 'class' entry when adding the screen structure details to the XML document.
created script 'radicore/menu/sql/mnu_role_task.sql' to add missing standard tasks to existing roles. This is not necessary for new roles as they are added automatically when they are created.
updated 'table(generate)b.php' so that when it creates the '<table>.report.inc' file for an OUTPUT2 task it will set the default column widths to a percentage so that the whole line is filled.
updated TCPDF library to version 5.9.112.
updated MENU database to include the OUTPUT5 pattern. You will have to run script 'radicore\menu\sql\menu.menu_export(2011-08-24).sql' to apply this change to your database.
added file 'std.output5.inc' as the controller for the OUTPUT5 pattern.
updated 'table(generate)a.php' and 'table(generate)b.php' to include OUTPUT5 pattern for address labels.
updated 'std.pdf.class.inc' to deal with the OUTPUT5 pattern (address labels).
updated 'default/pdf.styles.inc' so that 'noborder' style sets the border width to zero instead of the border colour to white.
updated 'std.pdf.class.inc' to allow the 'min_lines' option on $structure['body']['fields'] elements in the report structure file so that a cell with fewer lines will be padded with empty lines.
updated 'std.pdf.class.inc' to allow 'padding_left/right/top/bottom' and 'margin_bottom' to be specified in the 'pdf.styles.inc' file for use with the OUTPUT5 pattern (address labels).
