Radicore v1.70.0
MySQL v5.5.16

1. Create table with auto increment PK as the only column.

2. Import table and export to php result in dict.inc file with following:
$fieldspec['project_id'] =
array('type' => 'integer',
'size' => 11,
'auto_increment' => 'y',
'minvalue' => -2147483648,
'maxvalue' => 2147483647,
'pkey' => 'y',
'required' => 'y');

3. Create list1 transaction for this table.

4. Add a new record, the following error will show up upon submit:

Fatal Error: MySQL: You have an error in your SQL syntax; check the manual that corresponds to your MySQL server version for the right syntax to use near '' at line 1 (# 1064).

SQL query: INSERT INTO a_project SET

Error in line 941 of file 'C:\wamp\www\radicore\includes\dml.mysqli.class.inc'.

Why do you have a table with an auto-increment primary key and no non-key fields?

You haven't answered my question, so I've updated the mysql classes to remove the 'SET' from the 'INSERT INTO $tablename' when there is no field list. See the attached zip file for the updated scripts.

No real immediate purpose really. Just testing and checking different scenarios.
It is a low priority issue.
