Hi Tony,

What Apache modules do you recommend to run Radicore?
What LoadModule Directives do you use in your installation?

Thanks in advance for any suggestions.

Radicore does not require any particular Apache modules, so it should run in any standard Apache installation.

Tony,
In the standard installation Apache 2.22 installs these modules and uses the following 20 LoadModule directives:

LoadModule actions_module modules/mod_actions.so
LoadModule alias_module modules/mod_alias.so
LoadModule asis_module modules/mod_asis.so
LoadModule auth_basic_module modules/mod_auth_basic.so
LoadModule authn_default_module modules/mod_authn_default.so
LoadModule authn_file_module modules/mod_authn_file.so
LoadModule authz_default_module modules/mod_authz_default.so
LoadModule authz_groupfile_module modules/mod_authz_groupfile.so
LoadModule authz_host_module modules/mod_authz_host.so
LoadModule authz_user_module modules/mod_authz_user.so
LoadModule autoindex_module modules/mod_autoindex.so
LoadModule cgi_module modules/mod_cgi.so
LoadModule dir_module modules/mod_dir.so
LoadModule env_module modules/mod_env.so
LoadModule include_module modules/mod_include.so
LoadModule isapi_module modules/mod_isapi.so
LoadModule log_config_module modules/mod_log_config.so
LoadModule mime_module modules/mod_mime.so

LoadModule negotiation_module modules/mod_negotiation.so
LoadModule setenvif_module modules/mod_setenvif.so

Does Radicore need them all?

I have in my production server a minimal installation with hardly any module. Do I need to tell the administrator to install these 20 modules?

Perhaps not ISAPI because it is only for Windows.
Perhaps not mod_autoindex because I don't think Radicore uses the autoindex feature to generate a list of files.
Perhaps not mod_cgi because I already have php installed as a module.

Thanks in advance for any suggestion.

Radicore does not access any Apache modules, so it does not "need" any Apache modules.
Disable them one at a time and see if anything stops working on your website.
