Sir,
How can i see the XML files generated during the process of Radicore. One more thing. I am using an integer type for the primary key of my table. Is there any provision for Auto increment it while we adding the new record

To have XML documents written to disk so that you an view their contents please refer to http://www.tonymarston.net/php-mysql/infrastructure-faq.html #faq51

If you have a primary key which is set to auto_increment in a database table then this should be noted as such when the column details for that table are imported into the Data Dictionary (please refer to http://www.tonymarston.net/php-mysql/data-dictionary.html). This information will be included in the table structure file which is exported from the dictionary, and the relevant DML object will deal with it accordingly. You can use auto_increment columns in MySQL, PostgreSQL and Oracle.
