Hi Mr. Marston, please help me to solve this issue:
I have 3 tables wich are used as a MANY(parent)->LINK->MANY(child) relationship, I'm using the Link1 transaction to create the LINK table, but I want to update the table MANY(child) using a form as used in the Multi2 transaction.
The expected functionality is:
- Select a record from the table MANY(parent).
- The transaction form shows the records of the table MANY(child) associated through the table LINK, one of the fields of the table MANY(child) will be updated.
- Pressing SUBMIT button then the records of table MANY(child) are changed.
What is the better way to do it?
Thanks for advance!

I suggest you take a look at http://www.tonymarston.net/php-mysql/dialog-types.html#choose.link1.list2.multi2 for a list of possibilities.
